

# New Podpress Second Generation Capsule Sealing System

## GETTING STARTED GUIDE

Congratulations on your purchase of the REFLO Podpress 2<sup>nd</sup> Generation capsule refilling system. You are now just moments away from sustainably drinking coffee capsules of your own preferred flavours and saving money with every cup. It's important that you follow these steps carefully to ensure the best use of your Podpress 2 system.

You can also visit [reflo.co](http://reflo.co) for step by step guides on coffee choice, grinding, filling and drinking coffee sustainably.

### Package Contents:

- 1 x Podpress 2<sup>nd</sup> Generation
- 1 x Podpress "Fill & Tamp Tool"
- 10 x Re-usable Capsules

### SEALING USING PODPRESS 2

1. Place Podpress on a clean level workspace and set the Cap to one side.

2. Fill a capsule with ground coffee and place it in Podpress as shown. It should sit nicely in the pocket, with its flange resting on the Podpress surface. If not, remove the capsule and make sure the surface is concentric and in uppermost position, centred and level with the top of Podpress' body.

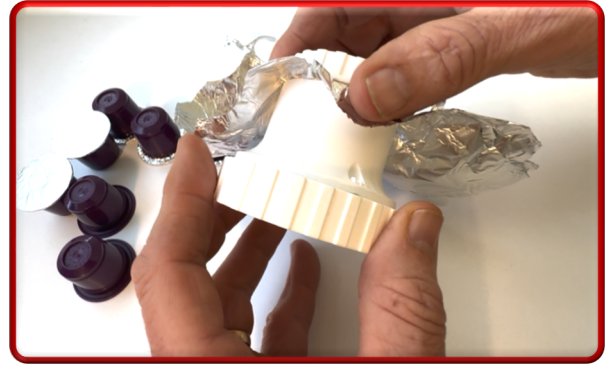

3. Take a piece of ordinary kitchen aluminium foil and place it over the capsule and body (a big or small piece, doesn't matter as long as it more than overlaps the body of Podpress by about 10mm all around)

4. Put the Podpress cap over the foil around the centre of Podpress, and press down until you hear and feel a click and the cap is contacting Podpress body. In this process a circle of foil has been cut and separated from the sheet.

5. Grasping the Cap and Body together with one hand, with the other hand turn the knurled base anti-clockwise as far as it will go. This puts the capsule in position for the sealing process.

6. While holding the base, rotate the knurled Cap one complete turn. You should see the foil seal also rotate as you turn the cap.  
(in this action, Podpress is folding the foil under the capsule flange).

7. Grasping the Cap, foil and body together, rotate the knurled base clockwise back to the starting position. You will notice some resistance and a quiet click when back in position. Press the Podpress Cap down one more time and this will complete the sealing process. It shouldn't move much at all. This action compresses the folded foil under the capsule flange, holding it firmly in place.

8. Remove Podpress Cap, and lift the sealed capsule from the base. You can now make your coffee in your machine (or store it for a drink later).

## ENJOYING!

9. Brew a coffee, sit back and appreciate the difference you are making!
